

# PegasusEMR Protocol Module

Protocol Modules provides a practice with the control and insight into protocol utilization and compliance never before seen.

## **Protocol Management:**

- Manage Protocols by disease state
- Define required medical test by protocol
- Define required pre medications by protocol
- Lists treatment references and internal administration notes
- Define standard dosing procedures by medication
- Specify unique "Tasks" for specified treatment
- View Protocol utilization by Date / Indication / Treatment Status (Complete/Held/Successful/Active)
- Drill down into listed treatments

## **Protocol Compliance:**

- Filter Treatment progress by a wide variety of variables, such as, Date of Death, Date of Dx, Last office visit, First office visit, Last chemo treatment to name only a few options
- Instantly view any patients treatment summary or flowsheet from the protocol management window

## **Advantages:**

- Standard Labs and Diagnostics are difficult to miss. System will continually notify user that a specific test is required for the current treatment being used
- Standard NCCN references ensure documentation and knowledge is passed through the system to all users
- Reporting and Filtering functions provide a unique insight to providers for successful treatments
- Ease of treatment location ensures provider acceptance and utilization of system.
